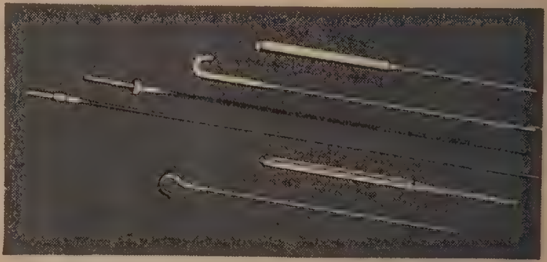
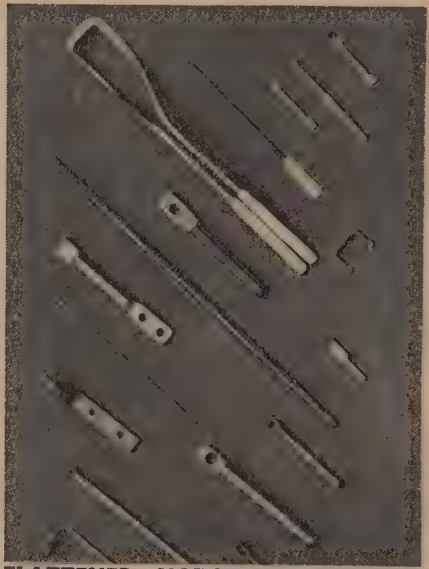
SWAGED LEADS

One-piece construction eliminates welded joint failures and resistance, increases rating output. In diameters from .015 to .080, necked down to as much as 50% original diameter.



WIRE FORMS

Shape and design limited only by the imagination. Available in round wire from .005 to .125 diameter, flat stock and ribbon.



FLATTENED, NOTCHED AND PIERCED PINS

In great variety to meet all needs for improved sealing, connections, etc., in wire as fine as .015 to .125. Rounded or square cut ends. Shaped to your specifications.

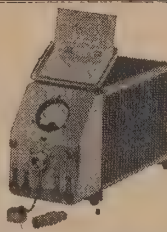
TS-118A/AP RADIO FREQUENCY WATTMETER



The rf wattmeter is a portable, load-resistor-type absorption wattmeter for measuring radio-frequency (rf) power within the frequency range of 20 to 1,400 megacycles per second (mcs). The wattmeter is used with a selected thermocouple to make power measurements; to aid in the tuning of transmitters; or, when used without a thermocouple, as a dummy antenna.
